CORNADO,SHENNY ROSE P.

BMI Calculator Application

1. **API**: RapidAPI BMI Calculator
2. **Frontend**: CSS
3. **Backend**: Node.js with express
4. **IDE**: Visual Studio Code

User Story:

- As a user, I want to know what is my body mass index so that I can check whether if I'm healthy or not.

Steps:

1. Set up a project by making a directory and initialized -y and installed express for the server and axios for making HTTP requests.
2. Create an .env file to store the API key and informations.
3. Created a backend server named as "server.js".
4. Typed node server.js in the command prompt to start the server.
5. Create a HTML file for the frontend which is named as "index.html".
6. Created a CSS file for designing named as "styles.css".
7. Creates a JavaScript file to handle submission and display results named as "script.js".
8. Installed http-server to serve the frontend files.
